Cybersecurity Manager

Cybersecurity Manager

Engineering aspects of cybersecurity

This Unit is about the analysis and design techniques used for cybersecurity during the development. It addresses topics such as

- System Threat Analysis and Cybersecurity Goals
- System Design and Vulnerability Analysis
- Software Design and Vulnerability Analysis
- Software Detailed Design and Cybersecurity
- Hardware and Firmware Design

Software Detailed Design and Cybersecurity:

This element considers at the software detailed design level related cybersecurity methods.

- The trainee knows cybersecurity related detailed SW design principles
- The trainee knows cybersecurity critical code inspections and reviews
- The trainee is able to select development tools and SW development environments, e.g. secure session key generation by random generator, encryption of signals, secure key store etc.

EUROSPI ACADEMY

EuroSPI Academy

The EuroSPI Academy is another part of the EuroSPI Learning Ecosystem. EuroSPI Academy provides specialized training and certification programs in process assessment and improvement, covering standards such as ASPICE, ISO 26262, and cybersecurity. It connects industry professionals and experts through structured courses, workshops, and best-practice sharing, supporting continuous professional development.

EUROSPI TOOLS

Capability Advisor

Capability Adviser is a web-based assessment tool designed for structured process evaluations, supporting models such as ASPICE, ISO 26262, Cybersecurity, and Hardware SPICE. It enables efficient team assessments, report generation, and data export in various formats while integrating seamlessly into organizational workflows. With its benchmarking and customization features, it facilitates process improvement and compliance with industry standards.

EUROSPI
CONFERENCE

EuroSPI Conference

EuroSPI (European Systems, Software & Service Process Improvement & Innovation) Conference is an annual event focused on process improvement, assessment models, and innovation in systems, software, and services. It brings together industry experts, researchers, and practitioners to exchange knowledge on topics such as ASPICE, ISO 26262, cybersecurity, and agile development. The conference features keynotes, technical sessions, and workshops, fostering collaboration between academia and industry to advance best practices and standards.
